he LED is arguably one of the most essential components in any maker project, from the Blink sketch and beyond. This pack will equip your workspace with plenty of the most common LEDs you'll ever need. You'll have 20 LEDs in the following colors to mix into your projects; Red, Green, Yellow, Blue and White ([That's 100 total](#)).

**Ideal for Makers** - 5mm through-hole LEDs are simply put, the most common LED you'll see in most projects. You can insert them straight into your breadboard, solder into veroboard, connect out to GPIO pins, or even mount them into a project panel as indicator lights.

**Sorted Colors** - With 5 colors to choose from, you'll have options for different uses.

**Connection and compatibility** - We find that these LEDs work well with between 2.5 - 3V at around 20mA current.
